Manorama Industries Ltd (NSE: MANORAMA | BSE 541974)

The unvarnished verdict: fundamentals, management, valuation, technicals, risks. Written for the person who wants the truth, not the diplomatic version. 19 October 2026; CMP ₹1,790.40 (−6.3% on the day).

VERDICT	CONVICTION	INTERESTING AT	OUR 12M TARGET
AVOID	**7 / 10**	**₹1,340**	**₹1,205**
at ₹1,790	that Avoid is right over 12 months. Our confidence is in the valuation, not the timing.	Hold zone. Genuinely attractive at ₹1,050 or below (our estimates, Section 3).	−32% from CMP; derived from our DCF and P/E blend. Not a prediction of a crash.

The stock in one line: a genuinely excellent business, priced as if it can never disappoint: 46x trailing earnings for a 27%-margin, two-product, partly promoter-sourced shea-and-mango-fat company whose growth steps down once its factory is full.

The six answers, in plain words

Dimension	Truth	Grade
Fundamentals	Spectacular growth (revenue ₹279 cr to ₹1,358 cr in four years, 48.5% CAGR) and a real margin step-up, but margins have been flat for seven quarters, gross margin is sliding, and cumulative FY24–FY26 operating cash flow (₹47 cr) was 12% of profit (₹385 cr).	Strong, but past its fastest phase
Management DNA	Executes and beats its own revenue guidance. But: family sold ₹200 cr of stock at ₹1,100 in Dec-2024, promoters are down to 51.4%, family pay is up 2.7x in a year, about 39% of purchases are from related parties, and disclosure is sloppy in places.	Capable, not clean
Valuation	45.8x trailing, 37x FY27E, 33x FY28E (our EPS). Even our bull-case DCF is 32% below the price. The price needs a 40% steady-state margin, or a cost of equity near 8.5%.	Expensive
Technical structure	Pullback inside a long uptrend that has just turned: below every short-term average, MACD below signal, at the one-month low, and below the last pivot support. Real support is 1,731, then 1,470–1,609.	Weakening
Risk	Three thesis-killers: cocoa-butter spread and customer power (sector); ₹710 cr of inventory and related-party sourcing (company); a de-rating of expensive mid-caps (macro).	Under-priced by the market
Verdict	Avoid at ₹1,790. Interesting at ₹1,340. Attractive at ₹1,050.	Avoid

Red flag called out, as required: promoter stake reduction. The promoters' stake fell from 54.32% to 51.38% in the September-2026 quarter [TL p.11], and family members sold 18.2 lakh shares (₹200 cr) at ₹1,100 in December 2024. Section 2.2 has the full account: the latest fall is mechanically explained by the QIP; the earlier sale is not.

Honest disclosures: (1) all figures come from the 17 documents in the Drive folder (three annual reports, BRSR, four earnings-call transcripts, two investor presentations, results filings, board-meeting outcomes, annual returns, AGM presentation, Trendlyne report of 19-Oct-2026). Citation tags are the same as in our 36-page initiation report. (2) No price-history file or chart image was provided, so the technical section uses the indicators and levels printed in the Trendlyne report; we draw no chart patterns that we cannot see. (3) Estimates are labelled "our estimate". (4) This is a virtual-portfolio study, not investment advice.

1. Fundamentals: what is real, and what is flattering

1.1 The growth was real, and it came from filling a factory

Standalone revenue went from ₹279 cr (FY22) to ₹1,358 cr (FY26), a 48.5% CAGR, and EBITDA margin from 14.0% to 27.1% [IP-Q1 s.6, 27–28; AR26 p.85]. PAT rose from ₹24 cr to ₹233 cr. This is not an accounting story: the auditor (Singhi & Co) gave an unmodified opinion with no key audit matters [AR26 p.196, 198], and operating cash flow finally turned strongly positive in FY26. But look at *why* it grew. Utilisation rose from about 63% in FY25 to about 85% in FY26 on a 40,000-tonne base [CC-Q2 p.4, 18], and fractionation capacity went from 15,000 t in FY22 to 47,500 t [IP-Q1 s.11–12]. That is a one-time catch-up as new capacity filled. It cannot be repeated until the next plants (₹460 cr plan, targeted for around Q3 FY28) are built [CC-Q1 p.5, 7].

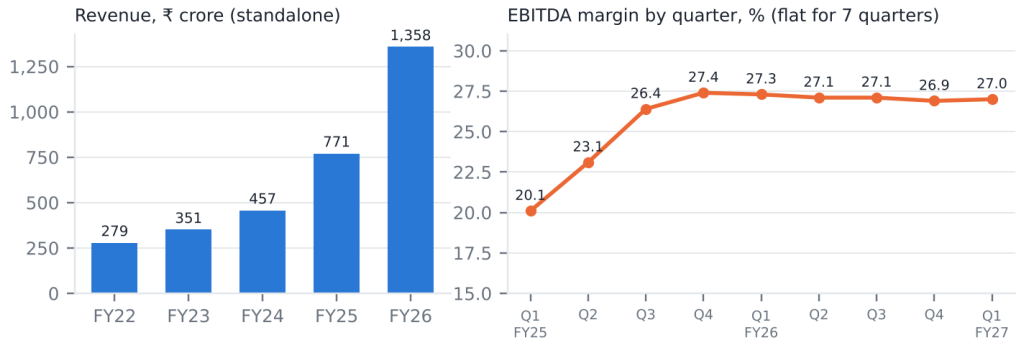

Figure 1: Revenue (left) and quarterly EBITDA margin (right). Sources: [IP-Q1 s.27–28; IP-Q4 s.7–8; R-Q1]. Q1 FY27 margin is our derivation from the results filing.

1.2 Three things the headline growth hides

- **Growth is already slowing.** Standalone revenue growth was +73.3% in Q3 FY26, +64.2% in Q4 and +39.5% in Q1 FY27 (₹404.0 cr vs ₹289.6 cr) [CC-Q3 p.2; IP-Q4 s.7; R-Q1]. Q1 was only +5.7% over Q4 (₹404.0 cr vs ₹382.3 cr). Management also softened its own utilisation aim: 85–90% for FY27 on the Q4 call, "80–85%, take 80%" on the Q1 call [CC-Q4 p.15–16; CC-Q1 p.4, 10, 15]. Management gave no numeric FY27 guidance on the Q1 call, after an analyst quoted an earlier ₹1,600–1,800 cr figure [CC-Q1 p.12, 14–15].
- **Margins stopped expanding in Q4 FY25 and gross margin is falling.** EBITDA margin has sat between 26.9% and 27.4% for seven quarters. Consolidated gross margin fell from 47.4% to 43.6% year on year in Q1 FY27 [IP-Q1 s.24]. EBITDA margin was held up because other expenses fell from 15.3% to 12.7% of revenue and employee cost from 6.3% to 4.7% (our arithmetic from the consolidated results [R-Q1]). That operating leverage ends when utilisation tops out. Management says gross margin is a pass-through and EBITDA is unaffected; that has held so far, but gross margin is now below the 45–50% range management calls normal [CC-Q3 p.5; CC-Q4 p.9–10].
- **Q1 FY27 profit is flattered by forex.** Standalone PAT rose 61% (₹81.6 cr vs ₹50.6 cr), but other income was ₹16.0 cr, of which management attributes ₹13 cr to forex gains [R-Q1; CC-Q1 p.16]. Stripping all other income and taxing at 26% (our estimate), PAT was about ₹69 cr against about ₹47 cr a year earlier, growth of about 45%. Still strong, but a different number. In Q4 FY26 the same line was a loss of ₹5.3 cr, and a ₹17.05 cr mark-to-market provision on forwards hit that quarter [R-Q1; CC-Q4 p.3–4].

1.3 Cash: the uncomfortable column

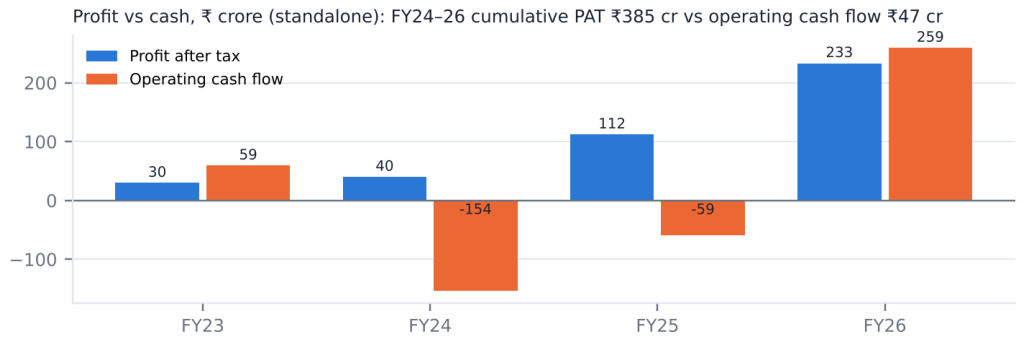

Figure 2: Profit after tax vs operating cash flow, standalone. Sources: [AR24 p.155; AR26 p.204–205].

Between FY24 and FY26 the company reported ₹385 cr of profit and generated ₹47 cr of operating cash flow (−₹153.5 cr, −₹58.7 cr and +₹259.4 cr). Inventory was the sink: ₹710 cr at March 2026, which is 52% of annual revenue, or about 191 days of sales (our arithmetic) [AR26 p.221; CC-Q4 p.6]. FY26 cash flow was excellent, but about ₹111 cr of the ₹259 cr came from receivables falling (₹101.7 cr to ₹56.3 cr) and payables rising (₹14.3 cr to

₹79.7 cr) [AR26 p.203]. Those do not repeat on demand. Working-capital days improved from 242 (FY22) to 125 (FY26), and management targets 90–100 [IP-Q4 s.10–11; CC-Q3 p.14–16], but a business that must hold seven months of inventory of wild-collected seeds will always eat cash when it grows. After the ₹500 cr QIP the stock is net cash on our pro-forma arithmetic (₹286 cr; Section 3), which removes balance-sheet risk but not the cash-conversion question. Trendlyne's own checklist agrees on the points it can test: consistent profit growth over eight quarters "No", consistent sales growth "No", increasing cash from operations "No", high Piotroski score "No" [TL p.8].

1.4 Concentration

Stearin and cocoa-butter equivalent (CBE) were 71.4% of FY26 revenue; CBE alone about 30% (it was about 10% two years earlier) [IP-Q1 s.5; CC-Q4 p.13–14]. The top ten customers are about 40% of sales and the named ones are Mondelez, Nestle and Hershey's (Ferrero also named) [CC-Q2 p.6, 8, 17]. Exports were 57.1% of FY26 revenue [AR26 p.231]. It is one segment, one plant complex at Birkoni, one raw-material ecosystem. Strength and fragility are the same fact. On the positive side, the balance sheet is sound (current ratio 2.00, DSCR 6.5, CARE rating upgraded to A+) [AR26 p.85; IP-Q1 s.6], return ratios are very high (standalone ROE 40.3%, ROCE 33.6%) [AR26 p.85], and management has a clear record of beating its early revenue guidance (FY26: first guided at ₹1,050 cr+, delivered ₹1,358 cr) [CC-Q2 p.3; CC-Q3 p.2–3].

2. Management DNA

2.1 What they are good at

The Saraf family built a niche processor that few in the world compete with [CC-Q2 p.14, 17] into a ₹11,000 cr company, and delivered on capacity, utilisation and margin together. Revenue guidance was raised three times in FY26 and still beaten [CC-Q2 p.3; CC-Q3 p.2–3]. The balance sheet was deleveraged (net debt/equity 0.83 to 0.38) before the equity raise [IP-Q1 s.26]. They also timed the QIP well for existing shareholders: ₹500 cr at ₹1,470 per share in July 2026, near the high [IP-Q1 s.21]. That is competence. It is not the same as being shareholder-friendly in every respect, as the next section shows.

2.2 The promoter red flag: stake reduction

Flag: YES. By the rule we apply to every stock, a falling promoter stake is an automatic red flag. Here is the full account, with the part that is mechanical separated from the part that is not.

Date	Event	What it means
24-Dec-2024	Block deals at ₹1,100: Vinita Saraf (8,18,180 + 2,72,733 + 1,31,279), Shrey Saraf 1,48,998, Agastya Saraf 1,48,998, Ritu Saraf 2,97,995. Total 18,18,183 shares = ₹200.0 cr (our arithmetic). Bank of India MF bought 99,000 [TL p.11].	**Genuine sale.** Family cashed out ₹200 cr at ₹1,100; the stock is now 63% higher.
7-Aug-2025	Off-market intra-family transfer of 23,84,562 shares to Ashish Saraf from Shrey and Agastya Saraf [TL p.11].	Consolidation inside the family, not a sale. Ashish Saraf held 46.17% at 31-Mar-26 [AR26 p.224–229].
Sep-25 to Jun-26	Promoter holding 54.3% [TL p.11; AR26 p.133].	Stable.
Jul-2026	QIP of 34,01,360 new shares (+5.7%) plus 12,500 ESOP shares: total shares 5,97,08,530 to 6,31,22,390 [AR26 p.89–90].	Dilution, and cash into the company at ₹1,470.
Sep-2026 quarter	Promoters 54.32% to 51.38% [TL p.11]. Our check: 3,24,35,406 promoter shares ÷ 6,31,22,390 = 51.38%.	**Mechanical.** The same share count gives exactly the reported percentage, so no sale in the quarter is evidenced.

So the honest reading: the latest fall to 51.4% is dilution, not selling. The December-2024 block is not dilution. It was a real exit by family members at ₹1,100, and the documents we hold record no promoter purchase since. Trendlyne's checklist marks "promoters buying or ownership stable" as No, while "promoter pledge is low and not increasing" is Yes and "insiders have not sold in the past 3 months" is Yes [TL p.8]. We found no pledge figure in the annual report pages we read, so we cannot quote a pledge percentage; we only relay Trendlyne's Yes. On the positive side, four directors (Ashish, Vinita and Shrey Saraf and Gautam Pal) have given personal guarantees on the company's bank borrowings [AR26 p.227–229], which is skin in the game, although it falls away as debt shrinks. The governance point is not that they sold. It is that insiders took money out at ₹1,100 and the stock now trades at ₹1,790, so the market is being asked to pay a much higher price than the family itself accepted.

2.3 Other things a sceptical analyst notes

- **Family pay is rising faster than profit.** Pay of the four family executives was ₹17.4 cr in FY26 (7.5% of standalone PAT) against ₹6.5 cr in FY25 (5.8%). The chairman's ₹7.0 cr performance bonus was 71% of his pay [AR26 p.236–238].

- **Related parties are large.** Related-party purchases were ₹351 cr, 38.9% of FY26 purchases (43.6% in FY25) [AR26 p.235–237; BRSR]. Manorama Africa Ltd (directors have significant influence) supplied ₹191.8 cr; the wholly owned Ghana subsidiary ₹153.0 cr. The company states all transactions are at arm's length; the pages we read contain no price benchmark, so this cannot be verified from the folder. The auditor raised no key audit matter on them.
- **Funding story changed.** January 2026: no immediate plan for external funding [CC-Q3]. April: shareholders approve a QIP of up to ₹500 cr [AR26 p.90]. July: ₹500 cr raised. Not improper, but "internally funded" was the message until it was not.
- **Housekeeping.** Revised results had to be filed after a wrong file was uploaded [CC-Q4 p.10–11]; the annual report gives conflicting capacity numbers for fractionation plant 2 (25,000 vs 32,500 t) [AR26 p.83]; management gave conflicting 9M growth numbers on the Q3 call [CC-Q3 p.7–8, 14–15]. Small items, but this is a ₹11,000 cr company.
- **Open question.** A supplier quality issue led the company to raise a debit note claiming the full amount (exchange notification around 12-Aug-2026); the call gave no detail and we hold no filing with the amount [CC-Q1 p.12–13]. We do not know its size and will not guess.
- **Subsidiaries are loss-making and growing.** Nine overseas subsidiaries; an analyst computed about ₹13.5 cr of FY26 losses in seven African entities [CC-Q4 p.9–10]. The board has authorised up to ₹150 cr equity, ₹100 cr loans and ₹100 cr guarantees for the Burkina Faso plant entity alone [AR26 p.90], a frontier-market project whose land clearances were still pending in Q1 FY27 [CC-Q1 p.4].

3. Valuation reality

Measure	Value	Source
Price / market cap	₹1,790.40 / about ₹11,300 cr (6,31,22,390 shares)	[TL]; our arithmetic
P/E trailing	45.8x (peers on Trendlyne: Varun 41.8x, Sanstar 40.6x, EID Parry 25.8x, Avanti Feeds 18.6x)	[TL p.4]
P/B and EV/EBITDA	15.0x and 18.9x	[TL p.4]
P/E on our EPS	37.1x FY27E (₹48.3), 33.5x FY28E (₹53.4); EPS growth FY28E only 11%	Our estimates [Model]
Earnings yield	2.7% on FY27E EPS vs 7.18% 10-year G-sec (28-Sep-26)	Our arithmetic; G-sec per initiation report
Trendlyne valuation score	34 (mid); "buy zone" on historical P/E: No; historical P/B: Yes	[TL p.4, 8]
Cash conversion yield	FY26 FCF ₹205 cr (CFO ₹259.4 cr less capex ₹54.1 cr) = 1.8% of market cap	[AR26 p.205]; our arithmetic

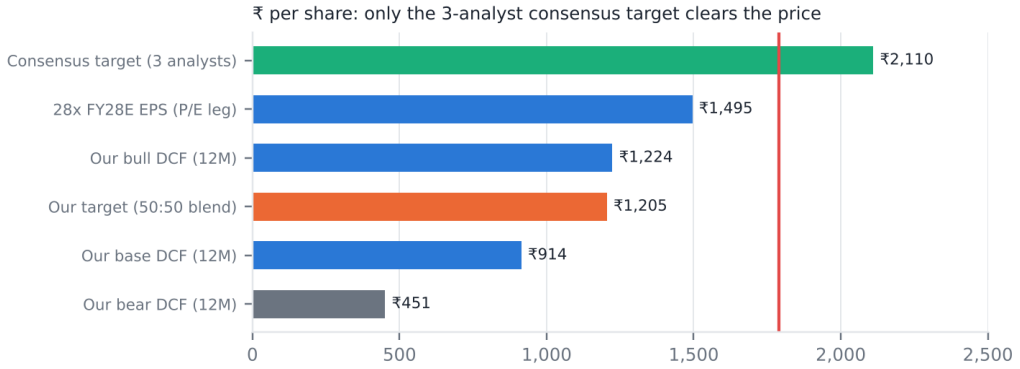

Figure 3: Where our valuation work lands against the price. Sources: our model (Section 11 of the initiation report); consensus per [TL p.9–10].

3.1 What is the price actually assuming?

- **Our bull case does not reach the price.** 30% growth in FY27E, 27% margins and 26% in FY29E gives a 12-month DCF value of ₹1,224, which is 32% below ₹1,790 (our estimate; WACC 12.36%, cost of equity 12.5%).
- **Reverse DCF.** Holding our growth path, the price needs a steady-state EBITDA margin of about 40% (FY26: 27.1%; never above 27.4% in any quarter), or a cost of equity of about 8.5% instead of 12.5%.
- **The debate is really about beta.** Break-even cost of equity needs a beta below about 0.31 for a Buy and above about 0.50 for a Sell (our estimates). Trendlyne shows beta of 0.35 (1 month), 0.53 (3 months), 1.31 (1 year) and 1.18 (3 years) [TL p.7]. The market is pricing the stock on the calm recent window. If the 1- and 3-year readings are right, the DCF is far below the price.
- **The consensus target is thin.** ₹2,111 average (low ₹2,080, high ₹2,141) from three analysts, all Buy or Strong Buy [TL p.9–10]. A band that tight from so few analysts tells you about coverage, not about certainty. Our target is ₹1,205 (50:50 blend of DCF ₹914 and 28x FY28E EPS ₹1,495).

- **Honest counterpoint.** Consensus FY27E EPS is ₹48.0 and ours is ₹48.3, so we are not bearish on earnings. We are bearish on the multiple. If the company beats us on margin or growth, a Hold is the most we would call for at this price, and a lower discount rate is the only route to a Buy.

De-rating arithmetic. Each five turns of P/E on FY28E EPS is about ₹267 per share, or 15% of the price. At 25x FY28E EPS (illustrative, not a forecast) the stock is ₹1,335. That is within a few percent of our ₹1,340 "interesting" level, which is why we picked it.

4. Technical structure

Data limits. We were given the Trendlyne report, not a price chart. Everything below comes from its printed indicators on 19-Oct-2026 3:07 PM [TL p.6–7]; the pivot levels are those the report prints (they use the prior session and are now stale); we do not describe candlestick patterns the report does not show ("no active candlesticks").

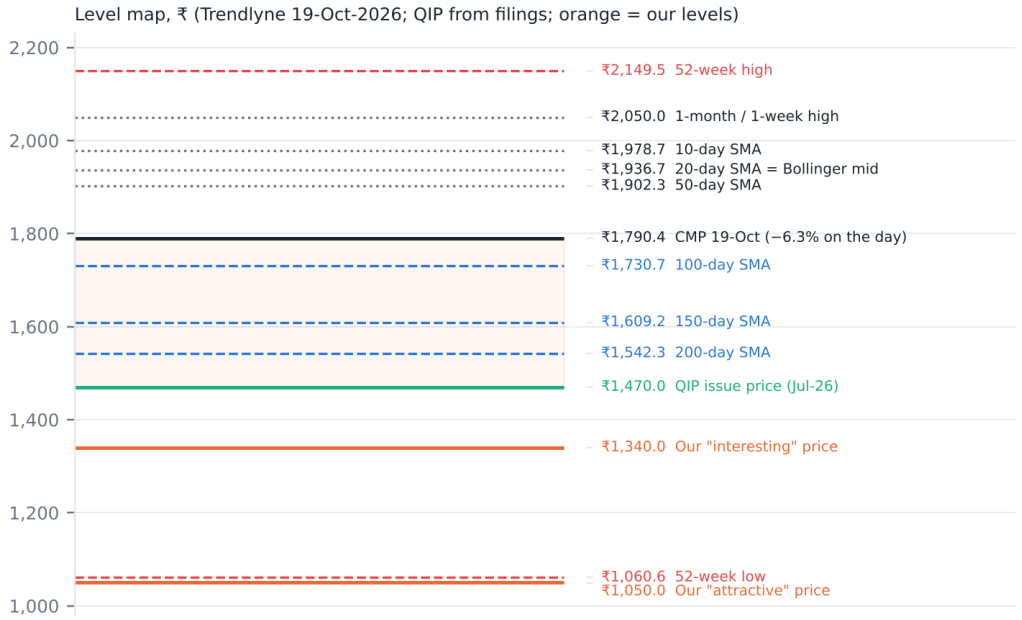

Figure 4: Price ladder. Dotted grey lines are short-term averages above price; dashed blue lines are long-term averages below price. Source: [TL p.6–7], company filings.

Indicator	Reading	Read-across
Trend	Price ₹1,790.4: below SMA 5/10/20/30/50 (₹1,963.6 / 1,978.7 / 1,936.7 / 1,963.6 / 1,902.3); above SMA 100/150/200 (₹1,730.7 / 1,609.2 / 1,542.3). Below 6 of 8 EMAs.	Short-term trend broken; long-term uptrend still intact
Range	1-day ₹1,787–1,911; 1-week and 1-month low ₹1,787; 3-month ₹1,562–2,150; 52-week ₹1,061–2,150	Sitting at the bottom of the last month; 16.7% below the high, 69% above the 52-week low
Momentum	RSI 46.8 (neutral); MACD 17.0 below signal 22.5, above zero line; Stochastic 53.0, Stoch RSI 31.3; CCI −24.9; Williams −61.4; Awesome 21.2; Ultimate 44.5	Momentum fading, not yet washed out. Oscillators: 3 bearish, 3 neutral, 3 bullish
Money flow	MFI 71.7, which Trendlyne flags as overbought "may show pullback"	Money-flow readings lag a −6% day; do not read as bullish
Trend strength / volatility	ADX 21.2 (below 25, no strong trend); ATR 66.7 (3.7% of price); Bollinger mid ₹1,936.7	A daily range of about ₹67 means ₹100+ moves are routine
Volume / delivery	16-Oct: 95.1K delivery of 156.1K traded (60.9%); week average 49.4%; month 46.9% [TL p.7]	Delivery share was healthy on Friday; today's volume is not in the report
Pivots	Pivot ₹1,922; S1 1,894; S2 1,877; S3 1,849; price is below S3 [TL p.7]	Every pivot support has gone; levels that held yesterday are now resistance

4.1 Reading it like a trader, without pretending to certainty

- **Phase.** A stock that rose from ₹1,061 to ₹2,150 in a year and has now broken its 50-day average on a 6% down day is in a correction at best and early distribution at worst. We cannot distinguish the two without volume history for today and the preceding weeks, which we do not have. We found no company disclosure in the folder explaining the fall, and we will not invent one.
- **Levels that matter.** Resistance: ₹1,902 (50-day), then the ₹1,937–1,979 cluster of 10/20/30-day averages, then ₹2,050 and ₹2,150. Support: ₹1,731 (100-day SMA; EMA100 is ₹1,766), then ₹1,609 and ₹1,542 (150- and 200-day), the 3-month low ₹1,562, and the QIP price ₹1,470, which institutions paid three months ago. A close

below ₹1,731 would confirm the correction; losing ₹1,542 would mean the whole year's uptrend structure is in question.

- **Behavioural read.** The stock is up 785% in five years and 17% in one [TL p.4]. Retail and other non-institutional holders held 39.8% at March 2026 against 5.9% for institutions (institutions rose to 10.6% after the QIP) [AR26 p.133; TL p.11]. Sell-side coverage is three analysts, all positive. That is the classic set-up where a growth story is owned for the narrative, and where a single disappointing print moves the price far more than the earnings change would justify. This is a judgement about how holders tend to behave, not a measurement.
- **Technical verdict.** Do not buy a stock that is breaking down from a 45x multiple just because the business is good. The technical entry zone, if the long-term trend is to be respected, is ₹1,540–1,610 (150/200-day averages); the valuation entry zone is ₹1,340, and the two overlap only if the market gives you a bad quarter to buy into.

5. Risk factors: the three thesis-killers

	What breaks	Evidence in the documents	Size of the damage (our estimates)
Sector	The cocoa-butter spread and customer power. CBE sells because it is cheaper than cocoa butter (the annual report cites a 30–40% ingredient saving, without a source [AR26 p.77–82]). If cocoa butter cheapens, the saving shrinks. EU and FSSAI cap CBE at 5% in chocolate [IP-Q1 s.8]. Management says pricing is cost-plus and not linked to cocoa butter [CC-Q3 p.9, 16], so this is our inference, not their statement.	CBE ≈30% and CBE + stearin 71.4% of revenue; top-10 customers ≈40%; contracts run 9–12 months [IP-Q1 s.5; CC-Q2 p.6, 10]	A 10% revenue miss at a 27% margin removes about ₹37 cr of EBITDA on FY26 revenue (10% of ₹1,358 cr = ₹136 cr, times 27%); every ₹1 of margin lost on FY28E revenue of ₹1,950 cr is ₹19.5 cr.
Company -specific	₹710 cr of inventory (52% of sales) in a wild-collected raw-material business, bought partly from related parties (39% of purchases) at prices we cannot benchmark. A bad harvest, a quality dispute (see the supplier debit note), or an inventory write-down hits profit and cash together.	Inventory ₹710 cr; related-party purchases ₹351 cr; cumulative FY24–26 CFO 12% of PAT [AR26 p.221, 235–237]	A 10% inventory write-down is ₹71 cr pre-tax, about 30% of FY26 PAT. Supplier-claim amount unknown.
Macro	De-rating of expensive mid-caps when yields or risk appetite change; also global confectionery demand. Currency is not the killer: the annual report's sensitivity is only ±₹0.24 cr PAT for a 1% INR move after hedging [AR26 p.244]. Hedged about 50–60% of net exposure [CC-Q1 p.16].	45.8x trailing P/E, 15x book; 57% exports; Middle East 2–3% of revenue [TL p.4; AR26 p.231; CC-Q4 p.8–9]	Five P/E turns on FY28E EPS = about ₹267 (≈15%) per share. A move to 25x = ₹1,335.

5.1 Other risks we weigh but rank lower

- **Execution of the ₹460 cr plan** (FY27 spend ₹225–250 cr; Q1 spent about ₹20 cr), with Burkina Faso as the riskiest piece and "clearances pending" [CC-Q1 p.4–5, 11–12]. Management says payback about three years for that plant.
- **Raw-material supply.** Nigeria's temporary shea-nut export ban was described by management as not material; 50–60% of procurement is imported seed and butter [CC-Q1 p.6–7]. The company also lists environmental and social risk in tribal collection areas, regulatory, supply-chain and cyber risk [AR26 p.86–87].
- **Data quality.** The Q4 FY26 transcript is of OCR quality and some investor-presentation slides are garbled; every figure we quote was checked against the audited statements or the results filing.

6. Final verdict

Question	Our answer
Buy, Hold or Avoid?	**AVOID at ₹1,790.** A superb business is not the same thing as a good purchase. Our estimates put fair value near ₹1,205 over 12 months.
Conviction (out of 10)	**7.** High on valuation (even our bull case sits 32% below the price). Held back from 9 because strong momentum, continuing earnings beats, and a lower discount rate than we use could all keep the stock higher for longer.
Price at which it becomes interesting	**₹1,340** (Hold zone: 12-month total return no worse than −10% on our estimates). **₹1,050 or below** is a genuine Buy on our numbers (about +15% total return). Technically, watch ₹1,731, then ₹1,540–1,610; the QIP price of ₹1,470 is also a sensible reference.
One line	A genuinely excellent business priced as if it can never disappoint.
What would make us wrong	Three things: (1) margins expanding well above 27% on the new capacity (the reverse DCF needs about 40%); (2) evidence that promoters are buying and not just diluting; (3) a market that accepts a cost of equity near 8.5%, which we regard as too low. Our estimate of upgrade triggers: Hold below ₹1,340, Buy below ₹1,050.
What would make us more bearish	Gross margin below 40%, inventory days rising again, a large supplier claim, a further family sale, or utilisation guidance cut again.

Note on the virtual portfolio. The tracker holds 1,000 shares of Manorama added on 19-Oct-2026 at the user's instruction as part of a study portfolio. That position does not change this view. Our rating is for a 12-month period and is not tied to anyone's purchase price. Whether a holder should sell is a separate question that depends on their cost, tax and time horizon; we make no recommendation for any individual.

Data gaps we would close first

- Price and volume history (daily) to see today's volume against the 20-day average.
- Promoter pledge percentage and the September-2026 shareholding filing (we hold Trendlyne's summary only).
- Size and cause of the supplier debit note; AGM voting results (21-Sep-2026) on related-party items.
- An independent benchmark for related-party purchase prices.

Sources: all from the Drive folder (Manorama resources): Annual Reports FY24, FY25, FY26 [AR24, AR25, AR26]; BRSR FY26; earnings-call transcripts Q2 FY26 to Q1 FY27 [CC-Q2…CC-Q1]; investor presentations Q4 FY26 and Q1 FY27 [IP-Q4, IP-Q1]; Q1 FY27 results filing [R-Q1]; board-meeting outcomes [BM]; annual returns [MGT7]; AGM presentation; Trendlyne stock report of 19-Oct-2026 [TL]. Page tags are printed page numbers (PDF page minus 3 for the annual reports). Our own model files and estimates are described in the 36-page initiation report (Manorama_Detailed.pdf).
